

IN THE CLAIMS:

Please cancel Claims 12-14, 28, 29, 31, 33-35, 52-54, 68, 69, 71, 73-75, 95 and 96, without prejudice or disclaimer of subject matter, and amend Claims 10, 15, 20, 32, 36, 37-40, 50, 60, 72 and 76-79 as follows. The following is a complete listing of claims and replaces all prior versions and listings of claims in the present application:

Claims 1.-9. (canceled).

10. (currently amended): An information processing apparatus with a function of receiving electronic mail, comprising:

extraction means, for extracting access information contained in electronic mail that has been received, said access information including ~~version limitation of access to an object~~ enabling information indicating whether it is permissible to access all versions of an object;

access means for accessing all versions of the object ~~under the version limitation specified by~~ if the access information extracted by said extraction means indicates that access to all versions of the objects is permissible; [[and]]

display means for presenting ~~[[a]] an at-a-glance display that corresponds to the object based upon a content of the object accessed~~ inclusive of all versions of the object based upon results of accessing performed by said access means.

11. (original): The apparatus according to claim 10, wherein said display means presents either a thumbnail display or a list display regarding objects accessed by said access means.

12.-14. (canceled).

15. (currently amended): The apparatus according to claim ~~[[14]]~~ 10, further comprising:

selection means for selecting a desired object from the at-a-glance display; and

content display means for displaying a content of the object that has been selected by said selection means.

16. (original): The apparatus according to claim 10, wherein said extraction means extracts the access information from a file that has been attached to electronic mail.

17. (previously presented): The apparatus according to claim 10, wherein said extraction means extracts the access information from a main body of electronic mail.

18. (previously presented): The apparatus according to claim 10, wherein:  
the access information includes position information for specifying a storage location at which the object is present; and  
using the access information such that said access means accesses the object at the storage location specified by the position information.

19. (previously presented): The apparatus according to claim 18, wherein the access information includes information for logging in to the storage location.

20. (currently amended): An information processing system in which electronic mail is sent and received between information processing apparatuses, comprising:

generating means for generating electronic mail information, which includes access information including ~~version limitation of access to~~ enabling information indicating whether it is permissible to access all versions of an object, stored in storage means, to be accessed by a receiver of the electronic mail;

communication means for sending and receiving the electronic mail information generated by said generating means; [[and]]

extraction means for extracting the access information contained in electronic mail that has been received via said communication means;

access means for accessing all versions of the object ~~under the version limitation specified by~~ if the access information contained in the electronic mail information received via said communication means indicates that access to all versions of the objects is permitted; and

display means for presenting an at-a-glance display inclusive of all versions of the object based upon results of accessing performed by said access means.

21. (original): The system according to claim 20, wherein said generating means includes:

designating means for designating a desired object to be attached to electronic mail;

acquisition means for acquiring access information relating to the object designated by said designating means; and

mail information generating means for generating electronic mail information in which the access information acquired by said acquisition means constitutes part of the electronic mail.

22. (previously presented): The system according to claim 21, wherein said mail information generating means generates an attachment file, which includes the access information acquired by said acquisition means, and attaches the generated attachment file to electronic mail that is to be transmitted.

23. (previously presented): The system according to claim 21, wherein said mail information generating means affixes the access information, which has been acquired by said acquisition means, to a main body of electronic mail that is to be transmitted.

24. (previously presented): The system according to claim 21, wherein the access information includes information indicating a storage location of the object, which has been designated by said designating means, in said system.

25. (previously presented): The system according to claim 21, wherein said designating means has display means for presenting an at-a-glance display, in a thumbnail or list format, of documents that are present in a specific storage area, and for displaying an icon corresponding to an electronic mail application that is for generating and transmitting electronic mail; and

wherein, when a desired document among the documents in the at-a-glance display is dropped onto the icon, the desired document is designated.

26. (previously presented): The system according to claim 21, wherein said acquisition means includes setting means for allowing a user to set access information via a prescribed user interface.

27.-29. (Canceled)

30. (original): The system according to claim 20, wherein said communication means transmits the electronic mail information, which has been generated by said generating means, to an information processing apparatus that has been designated.

31. (canceled).

32. (currently amended): The system according to claim ~~[[31]]~~ 20, wherein said display means presents either a thumbnail display or a list display regarding objects accessed by said access means.

33.-35. (canceled).

36. (currently amended): The system according to claim ~~[[35]]~~ 20, further comprising:

selection means for selecting a desired object from the at-a-glance display; and  
content display means for displaying a content of the object that has been selected  
by said selection means.

37. (currently amended): The system according to claim ~~[[31]]~~ 20, wherein  
said extraction means extracts the access information from a file that has been attached to  
electronic mail.

38. (currently amended): The system according to claim ~~[[31]]~~ 20, wherein  
said extraction means extracts the access information from a main body of electronic mail.

39. (currently amended): The system according to claim ~~[[31]]~~ 20, wherein:  
the access information includes position information for specifying a storage  
location at which the object is present; and

~~using~~ the access information is used such that said object access means accesses  
the object at the storage location specified by the position information.

40. (currently amended): The system according to claim ~~[[39]]~~ 20, wherein  
the access information includes information for logging in to the storage location.

41.-49. (Canceled)

50. (currently amended): An information processing method in an apparatus with a function of receiving electronic mail, said method comprising:

an extraction step, of extracting access information contained in electronic mail that has been received, said access information including ~~version limitation of access to an object~~ enabling information indicating whether it is permissible to access all versions of an object;

an access step, of accessing all versions of the object ~~under the version limitation specified by~~ if the access information extracted in said extraction step indicates that access to all versions of the object is permissible; and

a display step, of presenting [[a]] an at-a-glance display that corresponds to the object based upon a content of the object accessed inclusive of all versions of the object based upon result of accessing performed in said access step.

51. (original): The method according to claim 50, wherein said display step presents either a thumbnail display or a list display regarding objects accessed at said access step.

52.-54. (canceled).

55. (currently amended): The method according to claim [[54]] 50, further comprising:

a selection step of selecting a desired object from the at-a-glance display; and

a content display step of displaying a content of the object that has been selected at said selection step.

56. (original): The method according to claim 50, wherein said extraction step extracts the access information from a file that has been attached to electronic mail.

57. (previously presented): The method according to claim 50, wherein said extraction step extracts the access information from a main body of electronic mail.

58. (currently amended): The method according to claim 50, wherein:  
the access information includes position information for specifying a storage location at which the object is present; and  
~~using~~ the access information is used such that said access step accesses the object at the storage location specified by the position information.

59. (previously presented): The method according to claim 58, wherein the access information includes information for logging in to the storage location.

60. (currently amended): A method of controlling an information processing system in which electronic mail is sent and received between information processing apparatuses, said method comprising:

a generating step of generating electronic mail information, which includes access information indicating ~~version limitation of access to~~ enabling information indicating whether it is permissible to access all versions of an object, stored in a storage unit, to be accessed by a receiving information processing apparatus of the electronic mail;

a communication step of sending and receiving the electronic mail information generated at said generating step; [[and]]

an extraction step of extracting the access information contained in electronic mail that has been received in said communication step;

an access step of accessing all versions of the object based ~~upon the version limitation specified by~~ if the access information contained in the electronic mail information ~~received via said communication step indicates that access to all versions of the object is~~ permitted; and

a display step of presenting an at-a-glance display inclusive of all versions of the object based upon result of accessing performed at said access step.

61. (original): The method according to claim 60, wherein said generating step includes:

a designating step of designating a desired object to be attached to electronic mail;

an acquisition step of acquiring access information relating to the object designated at said designating step; and

mail information generating step of generating electronic mail information in which the access information acquired at said acquisition step constitutes part of the electronic mail.

62. (previously presented): The method according to claim 61, wherein said mail information generating step generates an attachment file, which includes the access

information acquired at said acquisition step, and attaches the generated attachment file to electronic mail that is to be transmitted.

63. (previously presented): The method according to claim 61, wherein said mail information generating step affixes the access information, which has been acquired at said acquisition step, to a main body of electronic mail that is to be transmitted.

64. (previously presented): The method according to claim 61, wherein the access information includes information indicating a storage location of the object, which has been designated at said designating step, in the system.

65. (previously presented): The method according to claim 61, wherein:  
said designating step includes a display step of presenting an at-a-glance display, in a thumbnail or list format, of documents that are present in a specific storage area, and of displaying an icon corresponding to an electronic mail application that is for generating and transmitting electronic mail; and

wherein, when a desired document among the documents in the at-a-glance display is dropped onto the icon, the desired document is designated.

66. (original): The method according to claim 61, wherein said acquisition step includes a setting step of allowing a user to set access information via a prescribed user interface.

67.-69. (Canceled)

70. (original): The method according to claim 60, wherein said communication step transmits the electronic mail information, which has been generated at said generating step, to an information processing apparatus that has been designated.

71. (canceled).

72. (currently amended): The method according to claim ~~[[71]]~~ 60, wherein said display step presents either a thumbnail display or a list display regarding objects accessed at said access step.

73.-75. (canceled).

76. (currently amended): The method according to claim ~~[[75]]~~ 60, further comprising:

a selection step of selecting a desired object from the at-a-glance display; and

a content display step of displaying a content of the object that has been selected at said selection step.

77. (currently amended): The method according to claim [[71]] 60, wherein said extraction step extracts the access information from a file that has been attached to electronic mail.

78. (currently amended): The method according to claim [[71]] 60, wherein said extraction step extracts the access information from a main body of electronic mail.

79. (currently amended): The method according to claim [[71]] 60, wherein:  
the access information includes position information for specifying a storage location at which the object is present; and

~~using~~ the access information is used such that said object access step accesses the object at the storage location specified by the position information.

80. (previously presented): The method according to claim 79, wherein the access information includes information for logging in to the storage location.

81.-83. (Canceled)

84. (previously presented): The system according to claim 21, further comprising setting means for setting whether or not to provide the access information to an unregistered user, who has not registered as a user, as a part of the access information.

85. (previously presented): The system according to claim 84, further comprising means for giving a password to the unregistered user when said setting means has set that the unregistered user may be provided with the access information.

86. (previously presented): The system according to claim 84, further comprising means for prohibiting the unregistered user from accessing the object when said setting means has set that the unregistered user is not to be provided with the access information.

87.-89. (Canceled)

90. (previously presented): The method according to claim 61, further comprising a setting step of setting whether or not to provide the access information to an unregistered user, who has not registered as a user, as a part of the access information.

91. (previously presented): The method according to claim 90, further comprising a step of giving a password to the unregistered user when said setting step has set that the unregistered user may be provided with the access information.

92. (previously presented): The method according to claim 90, further comprising a step of prohibiting the unregistered user from accessing the object when said setting step has set that the unregistered user is not to be provided with the access information.

93. (Canceled)

94. (previously presented):: A computer-readable memory storing a control program for causing a computer to process received mail, the control program comprising:

code of an extraction step, of extracting access information contained in electronic mail that has been received, said access information including version limitation of access to an object;

code of an access step, of accessing the object under the version limitation specified by the access information extracted in said extraction step; and

code of a display step, of presenting a display that corresponds to the object based upon a content of the object accessed in said access step.

95. and 96. (canceled).
